## *Hubble Space Telescope*

**Tom Durkin**

**SD Space Grant Consortium**

This presentation takes the audience on a virtual trip into space passing by the sun and several of the planets in our solar system and venturing outward to exploding stars and nebulae within our Milky Way Galaxy. We then venture further outward, beyond the Milky Way toward galaxies far, far away.

Most images are taken from NASA's Hubble Space Telescope and other spacecraft with high quality cameras and imaging equipment. Brief astronomical descriptions of each image are given.
